## **HYDRONIC WARM AIR**

This is a system that combines the features of a furnace and a boiler. A water boiler produces hot water that is circulated to an air handler. The water is pumped through a coil in the air handler and air blown over the coil is heated and circulated through the house through ducts.

**Boiler Section:** \$3000 - \$5000

**Air handler:** \$1500 - \$3000

*Actual prices can vary significantly depending on the contractor and area you live in. Obtaining at least three actual contractor prices is recommended before making decisions.*
