BASEMENT / CRAWL SPACE WATERPROOFING:

At times, improving exterior grade and gutter systems will rectify a seepage problem (see grade under an exterior section). Dehumidifiers can significantly help when basements are damp but do not have actual water seepage. Water seepage into basements and crawl spaces vary significantly. There may be a single crack that leaks and several methods can be utilized to seal it. More significant water issues may involve installation of interior or exterior drains and sump pits. Prices can vary depending on the type of control system from a few hundred dollars to ten thousand dollars. For full interior waterproofing by a professional waterproofing company, costs can be up word of \$100 per square foot of basement area. Patching cracks can vary from \$300-\$600.

If you have a water problem in your basement, obtaining actual prices for there by contractors specializing in that field is recommended.

Actual prices can vary significantly depending on the contractor and area you live in. Obtaining at least three actual contractor prices is recommended before making decisions.
